NARRATIVE

A RCRA inspection was conducted on the Jack Gaa property on September 12, 1988 by this author (Tim Case). James Jones accompanied this author. This site is known as LPC #217 000 0004. The inspection was conducted in response to an anonymous complaint received on September 12, 1988. The complainant said that Lonza Chemical Company is dumping tanker trucks full of hazardous waste on the farm fields. See Complaints #C-88-142, 143, and 144-P.

Agency personnel arrived at the site in question at 2:50 p.m. No one was on site. This author observed that a lime sludge had been applied over a portion of the field. The ground was dry on the surface, but wet below the surface. See photographs 1, 2, 3, and site sketch. Agency personnel departed at 3:20 p.m.

This author reviewed Agency files and found special waste stream permit #880535, which was granted to Jack Gaa. The permit allows Sherex Chemical Co. to dispose of lime sludge on Mr. Gaa's property. See attached waste stream permit and analysis.

This author telephone Serin Rao, Environmental Engineer for Sherex Chemical Co. on September 12, 1988. Mr. Rao said that the waste was in fact from Sherex and that the waste haulers were working 16-hour shifts and on weekends to take advantage of the weather. He said that the waste hauler was from out of town and wanted to complete the job as soon as possible. The permit does not restrict the hours of disposal. This concluded the interview.
